

## SPIRAL DRUM GRILLES

### PRODUCT DESCRIPTION

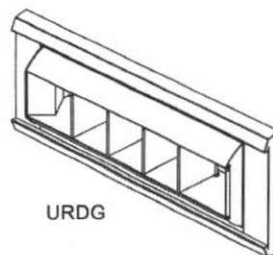

Designed to be used in applications requiring long throws with minimum duct work, Reliable Drum Grilles are ideal for large enclosures such as factories, arenas, airports, gymnasiums, or any large enclosed area. Featuring an extremely long throw, Model URDG's deflection vanes can readily be adjusted to increase or decrease air diffusion. The drum may be rotated 30° up or down from centerline, providing a full 60° angular adjustment of the jet centerline.
